OPERATIONS & DIGITAL TRANSFORMATION LEADER | MANUFACTURING | RELIABILITY | AUTOMATION & ANALYTICS

EXECUTIVE PROFILE

Operations and digital transformation leader with nearly 20 years of experience in 24/7 and regulated manufacturing, including 15 years of direct production operations and progressive leadership in maintenance/reliability, facilities, procurement, capital, compliance, and technology-enabled process improvement. Current Facilities Manager for a manufacturing and headquarters campus, leading cross-functional execution while building practical business systems with Microsoft Power Platform, Power BI, APIs, SQL, and ERP/CMMS data. Previously led four-shift maintenance execution in a 204,387 sq. ft. 24/7 food manufacturing facility and managed a \$1.5M maintenance budget. Delivered measurable results including 20% OEE improvement, 25% downtime reduction, 15% maintenance-cost reduction, 18% inventory-availability improvement, approximately 29% consumables-spend reduction, and utility-verified energy savings. Process-first leader who translates operational problems into governed, supportable workflows, analytics, standards, and measurable outcomes.

CORE LEADERSHIP & DIGITAL CAPABILITIES

Operations & Manufacturing Leadership: 24/7 and multi-shift operations; production support; safety/quality discipline; work prioritization; shutdown/outage planning; cross-functional execution; team direction and mentoring.

Maintenance, Reliability & Facilities: PM/CMMS strategy; equipment and infrastructure reliability; RCA/RCM/TPM; asset criticality; contractor management; utilities; lifecycle and repair-vs.-replace decisions.

Business Process & Digital Transformation: process mapping; source-of-truth and data-model design; Power Apps; Power Automate; SharePoint/Microsoft Lists; governed workflows; recurring work; inspections; exception handling; documentation and adoption.

Analytics, Integration & AI-Assisted Development: Power BI; Power Query; DAX; SQL; REST APIs; JSON; PowerShell; Python; operational KPI design; data reconciliation; rapid prototyping, troubleshooting, testing, and documentation with validated AI assistance.

Financial, Supplier & Capital Management: \$1.5M maintenance-budget experience; CAPEX/CAR business cases; TCO; RFP/RFQ support; negotiation; supplier performance; P2P controls; inventory and cost optimization.

PROFESSIONAL EXPERIENCE

Facilities Manager | MacLean-Fogg Company / Fastener Components - Mundelein, IL | Feb 2025 - Present

- Lead facilities and production-support operations across a multi-building manufacturing and headquarters campus spanning production, laboratories, shipping, warehouse, office, and utility spaces; align priorities and execution across Operations, Maintenance, Engineering, Purchasing, Finance/AP, EHS, Quality, IT, contractors, and vendors.
- Develop CAPEX/CAR, maintenance, and operating business cases using condition, capacity, criticality, redundancy, lifecycle cost, production impact, EHS requirements, vendor quotations, schedules, and total project cost; define scopes, bid comparisons, acceptance criteria, commercial controls, and closeout requirements.
- Lead digital and process transformation using Power BI, SharePoint/Microsoft Lists, Power Apps, Power Automate, REST/API data, and JDE/CMMS systems to convert frontline work into governed intake, ownership, evidence, exception handling, alerts, KPI visibility, and management follow-through.
- Built a governed Facilities/EHS operating model covering 143 active requirements and 500+ recurring annual tasks, establishing ownership, lifecycle/status controls, evidence capture, automated notifications, exception handling, and dashboard visibility.
- Designed and implemented a QR-based digital ladder inspection application, taking a functional version from initial design to working implementation in approximately one day through rapid requirements definition, iterative development, testing, and AI-assisted troubleshooting.
- Built operational analytics integrating more than 42,000 lithium-forklift telemetry records with 30-minute utility data to quantify equipment utilization, charging behavior, cost, demand exposure, condition, and optimization opportunities.
- Improved consumables purchasing and usage controls through vendor/price analysis and ordering discipline, supporting approximately 29% nominal spend reduction; separately led compressed-air reliability and efficiency work producing ComEd-verified annual savings of 79,802 kWh and \$9,802.

PRIOR MANUFACTURING & OPERATIONS LEADERSHIP

Facilities & Equipment Maintenance Planner / Team Lead | Crown Bakeries - Pleasant Prairie, WI | Jun 2021 - Sep 2024

- Led maintenance planning, scheduling, work prioritization, and daily execution support across four shifts in a 204,387 sq. ft. 24/7 food manufacturing facility, balancing staffing, production continuity, safety, PM compliance, shutdowns, and customer requirements.
- Directed maintenance personnel and coordinated suppliers/contractors with Production, Engineering, Quality/Food Safety, and Purchasing for equipment response, repairs, outages, facility services, and continuous-improvement work.
- Managed a \$1.5M maintenance budget and reduced maintenance costs by 15% through supplier negotiation, contract/repair review, PM discipline, repair prioritization, spare-parts controls, and reliability-centered decisions.
- Used operational data, Lean Six Sigma, RCA, RCM, and TPM methods to increase OEE by 20%, reduce downtime by 25%, and improve maintenance-inventory availability by 18%.
- Implemented preventive, corrective, and condition-based maintenance programs in ERP/CMMS systems and authored 50+ SOPs, PM procedures, and technical job instructions, improving training, consistency, safety, compliance, and repeatability across shifts.

Journeyman Production Operations Specialist (Mechanic) | Nosco - Gurnee, IL | Jul 2006 - Jun 2021

- Spent 15 years in direct production operations on high-speed automated packaging equipment serving a primarily pharmaceutical customer base, with accountability for safe operation, quality, throughput, uptime, setup, calibration, adjustment, troubleshooting, and rebuild work.
- Executed within GMP and Good Documentation expectations, including controlled procedures, setup/calibration records, quality checks, deviation awareness, and accurate production/maintenance documentation.
- Applied technical manuals, electrical/mechanical schematics, instrumentation concepts, and systematic root-cause analysis to restore reliable operation, remove recurring failures, and protect production output.
- Partnered with Engineering, Production, Quality, and Maintenance to remove bottlenecks, implement equipment/process improvements, mentor frontline peers, and standardize SOP and PM execution.

SELECTED SYSTEMS & OPERATING-MODEL WORK

- CMMS / PM Architecture: Designed a maintainable asset and preventive-maintenance model linking asset hierarchy, reusable/versioned job plans, scheduled PM instances, readings/findings, failure coding, corrective actions, evidence, labor/material visibility, supervisor review, and historical record preservation.
- Operational Automation: Build and troubleshoot scheduled/event-driven workflows for recurring task generation, reminders, date logic, field writeback, validation, notifications, status control, and exception management; favor reusable patterns and supportable lifecycle design over one-off fixes.
- AI-Assisted Development: Use modern AI tools to accelerate requirements decomposition, architecture exploration, scripts/queries, troubleshooting, testing, and documentation while validating outputs and preferring deterministic controls where business rules require predictable results.

EDUCATION, CREDENTIALS & TECHNOLOGY

Education: Bachelor of Science in Business Administration - Management, Western Governors University; emphasis in operations management, leadership, project management, supply chain, and process improvement.

Credentials: Lean Six Sigma Green Belt; IBM Data Science Professional Certificate; CSCMP Supply Chain Foundations certificates in Procurement, Inventory Management, Transportation, and Customer Relationship Management; SAP Materials Planning and Production Planning training; Microsoft Project Management, Business Analysis, and Data Analysis Professional Certificates.

Systems & Tools: Oracle JDE/JDE CAM, Sage X3, NEXCOR CAMS, SAP exposure, ReportsNow, Power BI, Power Apps, Power Automate, SharePoint, Microsoft Lists, SQL Server/SQL, Power Query, DAX, REST APIs, JSON, PowerShell, Python, R, advanced Excel, Primavera P6, Procore, AutoCAD, Teams, and Microsoft 365.

Methods: Lean Six Sigma; continuous improvement; KPI/OEE/downtime analysis; RCA; RCM; TPM; PM optimization; sourcing/RFP/RFQ; P2P controls; inventory analysis; JIT/order-point replenishment; EOQ/Kanban; CAPEX/TCO; standard work; SOP development; change implementation; contractor safety; LOTO/shutdown planning.
