FACILITIES AND MAINTENANCE LEADERSHIP

Operational Improvement and Digital Transformation

Facilities and operations leader with 20 years of experience across manufacturing, maintenance, reliability, procurement, and regulated production. Progressed from hands-on mechanical work into planning and management in 24/7 environments. Lead capital projects, contractors, utilities, preventive maintenance, and compliance while turning operational problems into measurable improvements. Combine Lean Six Sigma and asset-management discipline with Power BI, Power Platform, ERP/CMMS, and practical AI-assisted workflows. Work across technical, business, and frontline teams to improve uptime, cost, execution, and decision quality.

Core Capabilities

Facilities and reliability: Infrastructure and utilities; preventive maintenance; asset lifecycle planning; condition and criticality assessment; shutdown coordination; safety and compliance.

Business execution: Capital expenditure planning; project delivery; contractor and vendor management; procurement; budgeting; total cost of ownership; repair-versus-replace decisions.

Operational improvement: Lean Six Sigma; root-cause analysis; reliability-centered maintenance; KPI development; standard work; SOPs; training; cross-functional coordination.

Digital transformation: Power BI reporting; Power Apps and Power Automate; ERP/CMMS data; API integration; workflow design; data quality; evidence capture; AI-assisted problem-solving.

Professional Experience

Facilities Manager

MacLean-Fogg Component Solutions | Mundelein, IL | February 2025 - Present

- Manage facilities support for a manufacturing and headquarters campus, including infrastructure, utilities, contractors, preventive maintenance, capital projects, and coordination with EHS, Quality, Operations, and Maintenance.
- Lead project scoping, RFQs, vendor evaluation, contractor coordination, and outage planning; evaluate reliability, capacity, maintainability, lifecycle cost, and repair-versus-replace options to support investment decisions.
- Led compressed-air efficiency work spanning leak remediation, third-party energy program validation, and utility-data analysis; distinguish calculated energy opportunities from metered savings.
- Designed a Microsoft 365 Facilities/EHS control model linking requirement ownership, scheduled obligations, due dates, evidence, automated notifications, exceptions, and management dashboards.
- Developed cloud-refreshed battery telemetry reporting through REST APIs and Power BI; designed identity and deduplication checks and joined utility interval information to evaluate charging behavior, demand exposure, and off-hours consumption.
- Design Power Apps, Power Automate, SharePoint, and Power BI workflows for inspections, training, and reporting, including bilingual training materials, assignments, evidence capture, and completion visibility.

Professional Experience Continued

Facilities and Equipment Maintenance Planner / Team Lead

Crown Bakeries | Pleasant Prairie, WI | June 2021 - September 2024

- Led maintenance planning, prioritization, and daily execution in continuous, multi-shift food manufacturing; coordinated Production, Engineering, Quality/Food Safety, Purchasing, suppliers, and contractors.
- Managed maintenance operating budgets and purchasing priorities while balancing uptime, safety, quality, inventory, staffing, shutdown requirements, and customer commitments.
- Strengthened OEE, inventory availability, downtime response, and maintenance cost performance through structured planning and continuous improvement; supported reliability and production teams with actionable operating measures.
- Used ERP/CMMS data, Lean Six Sigma, root-cause analysis, and reliability-centered maintenance to identify recurring losses, prioritize improvement work, and strengthen preventive-maintenance execution.
- Authored SOPs, preventive-maintenance procedures, and technical instructions; coached frontline execution and standardized technical knowledge across shifts.

Journeyman Production Operations Specialist / Group Lead Mechanic

Nosco | Gurnee, IL | July 2006 - June 2021

- Supported high-speed automated packaging equipment serving a primarily pharmaceutical customer base for 15 years, working within GMP and controlled-documentation expectations.
- Performed equipment setup, calibration, mechanical troubleshooting, and rebuilds to support production quality, throughput, uptime, and process consistency.
- Partnered with Engineering, Production, Quality, and Maintenance on recurring equipment and process problems; implemented improvements, standardized procedures, and trained peers.

Education and Credentials

Bachelor of Science in Business Administration - Management

Western Governors University

Lean Six Sigma Green Belt | IBM Data Science Professional Certificate

Microsoft Data Analysis, Business Analysis, and Project Management Professional Certificates

CSCMP Supply Chain Foundations certificates | SAP Materials Planning and Production Planning training

Technology and Business Systems

Analytics and automation: Power BI; Power Query; DAX; advanced Excel; Power Apps; Power Automate; SharePoint; Microsoft Lists; SQL Server/SQL; Python; R; REST APIs; JSON; PowerShell.

Enterprise systems and AI: Oracle JDE/JDE CAM; ReportsNow; SAP; Sage X3; CAMS; Microsoft 365; ChatGPT; Microsoft Copilot. Apply AI with human review and independent validation of logic and outputs.

Portfolio

Public interactive demonstrations of operational workflows and reporting, including facility issues, inspections, digital Kanban, training, electrical usage, and forklift telemetry. Fictional data and visuals illustrate usability, performance measures, validation, and exception handling.
